## (54) RECEPTION ORIGINAL OUTPUT SYSTEM

### (57)Abstract:

**PURPOSE:** To eliminate the need for the rearrangement of a reception original by deciding the order of output depending on information of the original output order when it is received from a facsimile equipment and deciding the output order through the reference of a facsimile equipment attribute table defined in advance in a store and forward exchange when the information tells difference from the output order.

**CONSTITUTION:** When output order information is included in a reply from a receiver side facsimile equipment 8, the information is set to an output order flag and it is informed to an output processing section 32. When the output order information is not included in the reply, the output order information registered in a terminal attribute table 33 is set to the output order flag and it is informed to the processing section 32. When the output order information is not registered in the table 33, the output from a start page is informed to the processing section 32. Then the processing section 32 commands the extraction of the original to a store processing section 4 based on the output order informed from an output order control section 31, the processing section 4 extracts originals one by one page from a start page or an end page according to the command from the processing section 32 and the processing section 32 sends the original to the receiver terminal equipment.

**LEGAL STATUS**

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
